06TH, JUNE 2021

# THE STORY

SAFEPLUTO started off as a promising journey. Pluto was on his scheduled way to pluto to meet with Doge to discuss the upcoming Binance listing. As soon as they touched ground at a 100 million MC, Doge, filled with greed, wanted to have it all for himself and poisoned Pluto. As Pluto was slowly fainting away from the poison, Doge revealed his real face and Pluto recognized that all that time it was his friend Bad J hiding behind a mask. Left for dead but still alive, he woke up stranded on Pluto, without a ship as Bad J stole the keys to the rocket and flew back to earth. He felt shocked and sad, as all the blame was put on him, because Bad J was framing him for stealing his community's funds.

Filled with anger, he started to plan his revenge and this is the start of the real redemption story.

## THE TEAM

Unlike SAFEPLUTO where Bad J was keeping the contract hostage, SAVEPLUTO is a 100% community driven and 100% community owned, as we renounced ownership directly at the beginning.

# SAVEPLUTO TOKENOMICS

## Total Token Supply (TTS)

The Total Token Supply of SAVEPLUTO is 1,000,000,000,000 tokens

## Initial Burn (31%)

The Initial Burn is 31% of Total Supply equivalent to 310,000,000,000,000 tokens

The tokens were sent to the following Black Hole Address  
0x00000000000000000000000000000000dead

## SPACEDrop (14%)

Airdrops are for mortals, but we have been lost in outer space. Rescuing Pluto and bringing him back into our atmosphere, back to his community.

This process involves sending SAVEPLUTO Tokens to SAFEPLUTO holders

06TH, JUNE 2021

3. Binance Official Charity [www.binancecharity.com](http://www.binancecharity.com)

# Bad J's Karma

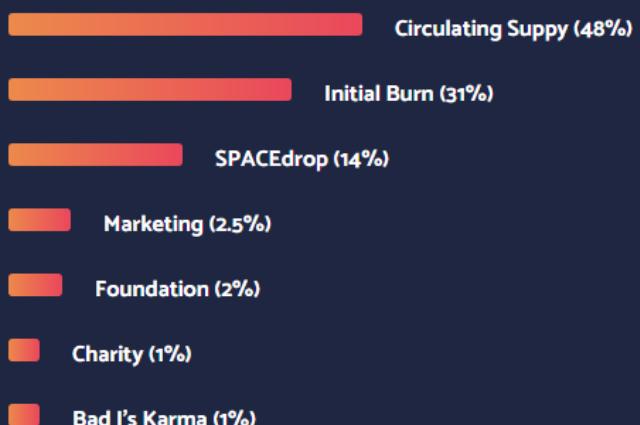

COMING SOON

## Total Token Circulation (TTC)

### Allocation of funds

The Total Token Supply is  
**1,000,000,000,000 tokens.**

## Smart Contract

Aside from an industry-standard format and structure, the only notable thing about the SAVEPLUTO Smart Contract is the fact that it applies a 10% Transaction Tax whenever tokens are moved between two addresses. 7.0% of that Transaction Tax is automatically distributed to Token Holders, and 3.0% is automatically added to the Liquidity Pool.

06TH, JUNE 2021

## Liquidity Pool

The \$SAVEPLUTO Liquidity Pool is composed of BNB and \$SAVEPLUTO tokens on PancakeSwap ([www.pancakeswap.finance](http://www.pancakeswap.finance)). Additional liquidity is automatically added to the Liquidity Pool by way of the \$SAVEPLUTO Transaction Tax, which automatically assigns 6% of every token move to the Liquidity Pool. This fee is added to the liquidity pool by transforming it into BNB:SAVEPLUTO LP Tokens, with ownership of those LP tokens renounced by sending them to the burn address. As a consequence of this design choice, the \$SAVEPLUTO token has a permanently increasing price floor in addition to an effectively reducing circulating supply

## Liquidity Provider Time Lock

To address the fears of a potential "rug pull" on the part of the Liquidity Provider, a 3 Months time lock has been imposed on the Liquidity Provider account

# PLUTOS SCAM DETECTOR

Pluto is angry with all the scams going around, almost 90% of tokens released every day turn up to be rug pulls. This drives people's confidence away from the crypto world and Pluto doesn't want that so he is working on a new weapon he calls the Scam Detector combining space rocks, plasma and solar energy to fight scammers and protect the community.

The Scam Detector is used to scan the coding of contract address that the community wants to check by focusing on 3 important factors:

1. Number of holders
2. Liquidity pools
3. Number of whale holders

It compiles all the data to give new investors as well as experienced investors an insight of the cryptocurrency with a full in-depth analysis regarding whether it is to be labeled safe to invest or a scam with a high potential of being rug pulled.

This benefits a lot of investors as not everyone knows what exactly to look for when it comes to reading a contract.

Plutos Scam Detector reveals all flaws and information within seconds. It is also able to scan all contracts within that token in order to see if the liquidity is really locked or not, this as well is another great feature that has not been established anywhere yet.
